

DIRECT IMAGING

PRODUCT FEATURES

Speed, quality, and flexibility are just a few of the advantages of direct-to-plate, short-run printing systems. With image resolution comparable to that of traditional offset quality, and the ability to produce small quantities of time-critical materials, direct-to-plate technology makes it easy to respond to changing market demands. The presses set-up quickly and – thanks to waterless-ink technology, which offers faster make-ready, sharper dot structure, and greater flexibility in ink lay-down – can print with virtually any type of paper.

- Kromekote has a superior gloss and smoothness combined with offset, waterless technology for coated, mottle-free resolution on every type of image.
- Knightkote Matte, (92 brightness), is fully coated on both sides and marries the clean, vivid print characteristics of a coated paper with the natural look of uncoated paper.
- Custom sizes are available upon request – consult your SMART Papers merchant or sales representative.
- Any color, weight and finish is available on a custom basis – consult your SMART Papers merchant or sales representative.

Stock - No minimum order quantity – order as little as one carton!
